

WE EMPOWER YOUR EXCEPTIONAL PROJECTS

POSITIONING • HANDLING • LIFTING • ASSEMBLY • EXCEPTIONAL TRANSPORT

SERVICES

| INDUSTRIAL HANDLING

We handle industrial products of all weights and sizes, taking a hands-on approach to every stage of your job, from planning to execution. Our strength lies in the experience we have gained over the years in a wide range of sectors and in our extensive range of equipment, which is designed to be as flexible and innovative as possible. Handling is carried out using self-propelled modular transporters (SPMTs), which can be assembled end-to-end or side-by-side to create a platform of the required dimensions. We have 80 SPMT axles capable of carrying up to 3000 tonnes, allowing us to transport even in the tightest of spaces.

| POSITIONING

We position industrial plant and equipment, ensuring maximum safety without forgetting the need to complete work as quickly as possible. Achieving these objectives requires careful pre-planning by the engineering department, the use of specialised state-of-the-art equipment and execution by highly skilled personnel. The CTS team provides all this. Positioning is carried out by means of lifting towers (also known as "hydraulic gantries"), hydraulic pistons or sliding systems, which can be on shoes, plates, wheels or tracks, and can be operated manually, mechanically or hydraulically.

| EXCEPTIONAL TRANSPORT

We are passionate about every project we undertake. The perfect planning of each job is the result of our experience and professionalism, combined with our desire to listen to and fulfil our customers' wishes. We take care of the job planning from start to finish: feasibility studies, route selection and obtaining permits. Nothing is left to chance to guarantee a service that meets all expectations. Our fleet of equipment is designed to respond flexibly and accurately to meet customer requirements. It consists of tractors, conventional trailers and semi-trailers, gooseneck, extendible and cradle low-bed trailers, as well as modular trailers and self-propelled modular transporters (SPMTs).

| INDUSTRIAL ASSEMBLY

We are able to carry out the assembly, installation and subsequent maintenance of industrial plant and equipment using our own equipment, offering our assembly and on-site support services worldwide. With the integration of RBM, a company specialising in this field, into CTS, we have extended our range of services in order to offer those who entrust us with their projects a comprehensive service and the security of a single point of contact. CTS's engineering department carries out the design of industrial installations, machinery and production lines, as well as the study for the execution of transport, handling, positioning and final assembly operations.

| SPECIAL LIFTING

The industrial lifting industry requires constant upgrading in order to respond to the problems faced by customers, which at times can be extremely complex. That is why we invest in state-of-the-art machinery and ongoing staff training. This particular type of lifting is carried out, as required, with hydraulic towers for lifting from above or with jacks for lifting from below. At CTS we have equipment with a lifting capacity of over 2,000 tonnes. In order to provide a complete service, we also have load cells available to check and certify the weight and centre of gravity of the loads being lifted or handled.

| LIFTING WITH CRANES

CTS's equipment has always been designed to operate indoors, in difficult situations or with limited space to manoeuvre, without interrupting the production cycle. The entry into CTS of Sassuolo – a historic company in Sassuolo, highly specialised in lifting and handling, with a strong focus on companies in the ceramics sector – has created significant synergies. We have truck-mounted and self-propelled hydraulic cranes, as well as truck cranes and electric and hybrid cranes that are ideal for zero-emission indoor use. We have several units in our crane fleet equipped with 4.0 technology, which offers improved safety and operating conditions.

SECTORS

Oil & Gas

Our roots in Ravenna are closely linked to the oil and gas sector, with which we have always worked. Operators in this sector see us as a valuable support right from the production phase, for optimal planning of the subsequent activities of assembly, weighing, testing and then transport and installation, for which CTS offers comprehensive services.

Ceramic

We know the ceramics industry well and have always been passionate about it. Oversized load transport, internal handling, lifting, assembly. The service we offer to customers in the ceramics industry is comprehensive, the result of extensive experience and high specialisation, always underpinned by a constant focus on safety and on-time delivery.

Power

Turbines, generators, alternators and boilers. Transporting, handling and lifting everything needed for a power plant is what we do every day, both in Italy and throughout Europe and neighbouring countries. Companies in the energy sector that choose CTS can count on precise and efficient solutions, the result of well-trained staff and the latest equipment.

Shipbuilding

Precision, smoothness and professionalism: these are the key words when it comes to transporting vessels. Over the years, these characteristics have earned CTS the trust of many manufacturers of tourist and commercial vessels, especially large ones.

Civil engineering

We thrive on civil engineering challenges. Whether we are launching viaducts and railway overpasses, working in tunnels, handling and assembling milling machines, or testing bridges and road ramps, we are always ready to find innovative solutions to make extraordinary jobs simple and safe.

Industrial installations

When planning the transport and assembly of industrial installations, it is essential to call on a professional.

Thanks to years of experience and the latest equipment, CTS is able to offer a complete service, from transport and positioning to assembly and maintenance, always using in-house design.

Values, mission and people

We plan the jobs we do down to the last detail.

Handling, transporting, lifting and assembling is our passion.

We are constantly striving to improve our performance, to provide a service of the highest quality, to maintain the safest possible working environment and to maximise the speed of our work.

ETHICS CODE OF CONDUCT

The trust our customers place in us is a tremendous asset.

We are committed to nurturing it every day. The Ethics Code of Conduct helps us by clearly and transparently defining the values and principles shared by all CTS employees.

THE CTS TEAM IS HIGHLY SPECIALISED

We strongly believe in the continuous development of people.

We work every day to create a stimulating and innovative environment where people can strive for continuous professional and personal growth.

History

The CTS Group brings together a number of specialised companies in order to respond quickly and efficiently to the various needs of its customers, offering a complete service with the guarantee of the highest safety standards: weighing, lifting, packing, loading, transport, unloading, assembly and positioning.

1998

Based on its experience in the transport of oversized loads, CTS began its activity as a cooperative consortium limited by shares under the leadership of its President, Daniele Sansavini.

2017

CTS changed its corporate structure and became a joint-stock company, gaining new momentum to move in the market.

2019

In order to meet the growing demands of its customers, CTS expanded with the acquisition of SMB, a Ravenna-based company specialising in the transport of oversized loads.

2024

The project to merge Sassuolgru and RBM, crane lifting and assembly companies already controlled by CTS, was successfully completed.

Certifications

FOR THOSE WHO KNOW US, CTS IS SYNONYMOUS WITH QUALITY

We have always been committed to making the workplace safe and improving the conditions in which we work every day.

We are certified:

We maintain a quality management system that aims to drive business processes towards continuous improvement in effectiveness and efficiency in order to deliver flawless service.

Always mindful of the environment, we have also obtained certification as an incentive to regularly assess where there is room for improvement and what we need to do to achieve our goals.

We care about everyone's health and safety. It was therefore only natural to obtain this certification to encourage continuous improvement in our business practices.

LEGALITY RATING

Our two-star rating reflects the high standards we have achieved in terms of legality requirements.
